

ASLTR TACTICAL VEST

The ASLTR Tactical Vest is uniquely designed to maximize comfort and tactical mobility. By studying human physiology, our engineers crafted the front and rear panels to minimize or eliminate pinch points and unnecessary overlap, reducing weight naturally.

Constructed from a combination of 500D Cordura Nylon and a high-strength laminate for all laser-cut MOLLE, the ASLTR is built to withstand constant stress under heavy loads.

The vest is packed with features to ensure safe and secure interoperability with equipment. It includes built-in cable management channels—two in the front and two in the rear—to prevent exposed wires that could pose a safety hazard to officers. A large admin pocket is built into the upper front portion of the vest, accessible from either side and spacious enough to store a large cell phone or similar-sized object. Additionally, there are two separate built-in pockets on either side of the front cummerbund flap for extra administrative items. The body side of the cummerbund features a removable three-cell elastic band for storing additional magazines, radios, or similar-sized objects. The cummerbund also utilizes First Spear TUBES® for quick donning and doffing.

The ASLTR comes standard with NIJ 0101.06 Certified Level IIIA soft armor panels in the front, rear, and side cummerbunds. Hard armor plates can be inserted from the bottom of the vest and are secured via a plate suspension strap. For mission-specific requirements, additional protective equipment such as neck, collar, deltoid, and groin protectors can be applied.

The ASLTR is designed for the discerning Tactical Operator who demands superior ballistic protection in a lighter solution vest.
